

SLIDE VALERIANA ECO TRAX

Fully electric harvesting machine for corn-salad suitable for harvesting in small spaces both in open field and in green house. Small frame. Equipped with two rubber tracks thanks to which we can work in any condition. Compared to the other electric harvesters that work in 48 volts we have preferred to install a battery pack with 80 volts; this serves to reduce the weight by almost half compared to the other versions but at the same time we guarantee from 14 to 16 hours of work. For the various services, three-phase asynchronous brushless motors have been installed, therefore ZERO MAINTENANCE. The machine is managed by a small water-resistant computer controlled by a card with our own CAN bus electronic management. The advanced cutting system allows working on any type of soil, both sandblasted and without sandblast.
