

## VENTUM

VENTUM is the innovative machine that has a collection capacity of over 50% compared to a traditional machine; the driver's seat is located above the cutting bar and is composed of a single operator. The main innovation of this machine is due to the collection with the transport of the product through a vertical air tunnel able to select the product and discard the foreign bodies by specific weight. Another important innovation is the automatic packing and weighing of the boxes; this system allows to considerably reduce the times of collection compared to a traditional harvester.
